

Make a shop

This weeks maths is all about Money. Shops is a great game to play!

To make it more real, you could use real (empty) food packets or boxes and write the prices on them. You can use real coins to pay with...it makes it more interesting!

You could pay for one item at a time or two two items together to practice adding. You might want to use pennies for counting in ones, or add in some bigger coins when you're ready.

Take it in turn to be the shopkeeper and the customer! You could have a basket/bag and a purse.

On a piece of paper you could write a menu or price list (you could do a price list for snack time too!)
