

## **DINOSAUR SENSORY IDEAS:**

- **Frozen dinosaur eggs-(On plan.)**

Using a glove or balloon fill up with water add small dinosaurs if you have them. Tie the end of glove/ balloon and pop in freezer

After 24 hours break the glove/ balloon and take the dinosaur egg out and put them in a tray to explore.

What is happening to the ice? What can you see in the ice? Is the ice hot or cold?

- **Dinosaur swamp**

Add cornflour to water, you can add more water or cornflour depending on what texture you want. Put it in a tray and explore the texture hard in the tray but when it is lifted out on your hands/ fingers, what happens to the texture? Is it runny?

If you do not have dinosaurs to add to the mixture then just use spoons, brushes etc. and explore.

- **Dinosaurs in the snow-(see on plan)**

Spray some shaving foam either in a sand tray or another type of tray, you could add paint/ food colouring (Yellow/Red) like a volcano and explore the texture.

Put some shaving foam in your hands and clap your hands together make it really snow! (One activity for outside!!)
