

How to Recycle a Drinks Bottle into a Terrarium.

Materials:

- Small pebbles,
- Potting soil,
- A few small plants,
- A bottle
- A Sharpe knife

Use a coke bottle because it has just the right shape. It comes inward near the bottom, which allows the top to sit over it pretty securely.

Cut out the middle part so that the bottom measures 9cm tall and the top measures 13cm tall.

Ask an adult to help!

Laying the Terrarium Foundations

Gather together your supplies: small pebbles and potting soil.

Start with the pebbles, and then the potting soil.

Adding Plants to Your Terrarium:

Find some small plants with roots.

Make little impressions in the soil and set in the plants.

If you can find some different coloured stones, it would look good.

Add a little water.

Put on the top securely.

As it is air tight it should last, just watch for mould and remove it.

Happy gardening.
