Week	Objective	Activity	Resources
(WC 08.06 .20)	<p>To explore the connection between seeing a colour and imagined taste</p>  <p>Links: Science, communication, sensory awareness, colouring skills.</p>	<ol style="list-style-type: none">1. Sort the jelly beans into colour groups. Choose your 3 favourite colours for the experiment.2. Ask your willing taste testers to choose their first jelly bean.3. Before they taste it ask them to colour-in the first jelly bean outline on their record sheet to match their chosen jelly bean.4. Taste testing time! Let the taste testers eat their jelly bean and ask them what they think the flavour is.5. Write down the flavour in the square next to the coloured-in jelly bean on the record sheet. An adult can help.6. Talk about the flavours. Do you all agree on the same flavour for each colour? In our experiment the red jelly bean was nominated as 'raspberry' by one tester and 'cherry' by another. <p>Have a drink of water before the next taste test. Repeat for each colour jelly bean and talk about your ideas.</p>	<p>For this experiment you will need:</p> <p>A packet of jelly beans</p> <p>Taste testers (you can be one)</p> <p>The jelly bean taste testing record sheet. One for each person</p> <p>Coloured felt tips to match the jelly beans</p> <p>Water</p>
